Product Description

Slick Rock Landscape Containers are GFRC (Glass Fiber Reinforced Concrete) products made of High Performance Concrete (HPC) from a proprietary blend of cement, pozzolins, aggregates, sand, water and admixtures with shapes including round, squared, tapered and curved for use as planters, fire-bowls, water features and landscape features.

To determine whether concrete is right for you, think about whether:

- *You want something unique and personalized*
- *You want something that looks natural and has character*
- *You appreciate high-quality, handcrafted items*
- *Synthetic solid surface materials look and feel like plastic*
- *You need a color or visual texture that's not available with other materials*

Features

- Oversized, stylized designs
- Increased flexural and tensile strengths (when compared to typical pre-cast concrete)
- Increased psi ratings (when compared to typical pre-cast concrete)
- Up to 80% recycled content with use of recycled aggregate and additives (upon request only)
 - Recycled Glass - Recycled Porcelain - Fly Ash - Bottom Ash
- High Solids topical sealer (external) – Elastomeric sealer for interior of planter
- All raw materials harvested locally and regionally
- High early strength
- Broad offering of contemporary designs suitable for a variety of exterior decors
- Pre-cast GFRC, High Performance Concrete (HPC), moisture cured and controlled sealing conditions
- Slick polished-like surfaces
- Unique styles and surface finishes
- Standard and Custom sizes, shapes, and colors
- Finish options include semi-gloss (satin and matte upon request)
 - High performance sealers designed for extreme conditions

Typical Areas of Use

- Commercial, retail and professional facades
 - Interior and exterior commercial/residential
 - Resorts / Hotels
 - Golf courses
 - Malls and shopping areas
 - Sporting Venues
- *Any location where an enhanced exterior décor is desired

Applications

- Planters
- Landscape containers
- Fire-bowls
- Water features
- Landscape designs
- Barrier protection
- PSP Perimeter Security Protection – PSD Perimeter Security Device

Benefits

- Stylish and contemporary design offerings
- (18) standard colors with custom coloring options
- Tremendous color accuracy and control (compared to typical integral colorant methods)
- Robust and durable
- Lasting beauty and warmth
- Increased structural integrity utilizing (HPC) High Performance Concrete and Fiber Technology
- Flexible designs and color combinations
- Fast order turn around production times

Surface Finish

The standard surface finish for Slick Rock products is a smooth “pressed cast” concrete with topically applied stains and sealants. This concrete casting method exemplifies the elegance and performance of finely polished concrete or stone surface. There are 18 colors to choose from, which are protected with a semi-gloss acrylic/urethane sealant with optional elastomeric sealer for the interior.

- Custom finishes available. Concrete is very malleable and will produce unique results when cast against a wide variety of materials including: melamine, plastic, formed plastics, epoxy, rubber, fabric molding and other materials.

Environment

Slick Rock Inc. products are fabricated with sustainability in mind. Our products are made from no less than 30% recycled content (upon request), and produced using locally and regionally harvested materials.

Mold Design

Our custom molds are proprietary and fabricated by Slick Rock Inc. Slick Rock standard product lines offer a wide range of shapes and “looks” to suit most any commercial or residential application. Custom product lines and designs are available upon request.

Custom and Specified Design

Slick Rock Inc. products can be designed in house or fabricated to your desired specifications which meet reasonable expectation of product performance. We offer CAD design to help visualize your final product upon request.

Colors

Slick Rock offers 18 standard colors for application to our concrete products. Our water based, low VOC stains are extremely durable and long lasting exhibiting exceptional UV stability and wear resistance. While the concrete industry at large has advanced in its ability to provide expanded color options, Slick Rock Inc. leads the way in delivering this color spectrum.

Custom options:

Custom colors are mixed upon request, providing new options and alternatives. Natural materials cannot compete with the design freedom, custom color choices, and control now offered in custom concrete material.

Fabrication and Installation

Application requirements, logistics, and space constraints all contribute to determining the size, shape and seam placement of your custom concrete products.

Company Profile

Slick Rock Inc., a design and installation company devoted to the production of high quality concrete items offering reliable, professional service with a reputable history of quality and beauty. We enjoy and have a deep appreciation for design and architecture, and encourage involved relationships with interior designers, architects, builders, and of course homeowners. Our parent company, Riverbed Concrete Inc. was established in 2001 as the only pre-cast concrete countertop business in San Antonio and as an installer of high quality stained and diamond polished concrete flooring. In 2006 Riverbed and Slick Rock Inc. Inc. moved to Boerne, Tx to serve a growing need and demand for quality in high end decorative concrete for Hill Country residences and business which has now expanded to a national offering. Slick Rock Inc. Inc. is a national service and manufacturing corporation based in Boerne, Tx.

Company Overview

Specializing in large oversized designs, Slick Rock Inc. Pre-Cast products have become the favorite of designers and architects. Slick Rock Inc. products lend themselves to aesthetic warmth, compelling shape, proportion, and depth of colors that are unattainable with other manufactures. Slick Rock Inc. fabricates custom concrete products for a wide variety of applications with specific focus on commercial, city scape and architecturally designed spaces. Concrete is an exciting alternative to more common surfaces which can be used for both interior and exterior environments alike.
