The Propane Regulator Doesn't Fit! Yes, It Does

Typical Propane Tank – See Inside Threads. That's where our Regulators Screw into – the inside threads (which are **REVERSE** Threaded).

Can I Use A Spark Igniter To Light My Fire Feature?

Ever turn the gas on a grill on, and you click the push button igniter; click-click- click- click - WOOSH! Well, that's low pressure, most fire features are high(er) pressure. With Nat Gas, fire goes up, with LP, it goes down than up; dangerous! Light windproof lighter over burner, slowly turn on gas until lit, stand back and turn up. **WORKS EVERY TIME!**

Great "match light solution" Bernzomatic TS4000 or smaller LTR200 Windproof, great for cigars, don't get stolen and last many seasons .Light windproof lighter over burner, slowly turn on gas until lit, stand back and turn up. **WORKS EVERY TIME!**
